

## Geography for Year 5

### Water

*Water supply in the world.*

- Importance of clean water – how it is supplied.
- Who owns and manages water.
- Contrast between water supply in Europe and in less economically developed countries.
- Consequences of too much or too little water.
- Where we can find water locally and in the world, using atlas and map skills?
- How does water get to where it is needed?
- The uses of water and why it is needed.
- How can water be made usable so it is fit for consumption?
- What jobs are involved in water supply?
- What is the effect on the land?

### A contrasting locality – a village in India

*Contrasting Bratislava with Chembakolli in India.*

- Where is Chembakolli?
- What do we expect it to be like?
- What is it actually like and why is it like this?
  - land use;
  - features of the settlement;
  - distance from other places;
  - main employment;
  - main crops and exports/manufacturing.
- What are the similarities and differences between Chembakolli and Bratislava?

### Investigating rivers

*The effects that rivers have on the landscape will be the focus of this study.*

- Rivers erode, transport and deposit materials to another site.
- River systems in other parts of the world.
- Use of rivers in different places and cultures.
- Where does water come from?
- Where does water go?
- Where is this river?
